

Datavideo DAC-80

ProdCode: DATADAC80

2 Channel Audio Isolation Transformer

[\[Download Images\]](#) (.zip file)

Features

- Easy to use
- Eliminate audio noise caused by ground loops
- Designed for low signal loss and low distortion
- Passive device (No power required)

DAC-80 is designed to remove hum and buzz created by ground loops.

Normal voltage differences in the system grounding points between different pieces of equipment cause small AC power currents to flow in the shield of audio cables.

Capacitance between a power transformer's primary and secondary windings introduce signals to the circuit ground which will also create small current flows in the cable shield.

Either of these problems will create hum in audio signals. DAC-80 breaks the interequipment ground path and greatly increases the rejection in the input circuits while remaining transparent to the audio signal.

In the box:

- 1 x DAC-80
-

Need Further Support?

If you have any questions or require additional support regarding this product release, please do not hesitate to contact us. Our team is here to assist you with any inquiries or provide further information or marketing collateral as needed.

Contact Us:
